# PRODUCT OVERVIEW

## Basic parameter

Product model : i5

Product name : i5 Ultrasonic cannon

N. W. : 1.8 KG

Machine size : 32cm\*24cm\*7.8cm

Rated frequency: 50~60HZ

Nominal voltage: 110V~220V available

Rated power :  $\geq 30W$

Control output : The host button  
and handle button  
control adjustments

Language : English (languages can be customized)

Function : Skin Tightening and Lifting

## PRODUCT LIST

Description	QUANTITY
Host	x1
Handle	x1
Power cord	x1
handle replacement head	x1
Instruction manual (including warranty card)	x1

# PROCESS INTRUCTION

- (1) Before use, thoroughly cleanse your face with a facial cleanser to remove surface dirt and dry off the moisture.
- (2) an appropriate amount of gel on the area to be treated to facilitate lubrication and energy transmission.
- (3) Select the operation depth based on the treatment area and skin condition:  
3.0mm: Commonly used for areas with thinner fat layers such as the forehead, eye area, and temples.  
4.5mm: Commonly used for areas with more prominent fat layers such as the chin, nasolabial folds, and cheeks.
- (4) Plug in the power cord, press the power switch, and the device will default to M1 output mode with an energy level of 1. It is recommended to use the default settings for the first operation, and then adjust appropriately based on your tolerance in later sessions.

**M1; 0.5 seconds/interval (Commonly used mode)**

**M2; 1 second/interval**

## **(5) Operating method**

During operation, it is essential to ensure that the probe is in close contact with the skin and move it slowly along the facial contours with gentle pressure. instance, starting from the chin, lift upwards along the jawline towards the area in front of the ear. Later, depending on the skin's needs, a-by-spot technique can be adopted, focusing particularly on areas such as the nasolabial folds, jawline, and apples of the cheeks.

## **(6) Operation time**

The full face treatment time is recommended to be 10–15 minutes, and the eye area treatment time is recommended to be 5–8 minutes; the same area should not be treated more than three times a week.

**(7)** After the procedure, the facial gel residue should be cleaned up in time to prevent pore blockage.

**(8)** After the operation, turn off the power, unplug the power cord, clean the gel residue on the print head, disinfect it with an swab, and then dry it with a clean towel;; Wipe the handle and body with a clean soft cloth, and avoid using chemical cleaners or water for cleaning.

- (1) This product is designed with ten levels. The higher the level, the higher the temperature rise, and the greater the stimulation to the collagen fascia. Therefore, we recommend users to start from level 1 for daily care and when there are no obvious skin issues. You can adjust to a higher level based the overall skin temperature during use.
- (2) For those with obvious skin issues or experience with beauty devices, you can appropriately adjust to a higher level based on your own adapt. Any level suggestion should be chosen based on your skin's tolerance.

Before using the instrument, please read the following contents carefully. If you do not strictly abide by the usage rules and precautions, the desired effect may not be achieved. If there is no progress in the place you want to change, or if you have any questions about this instrument, please consult your instructor as soon as possible. The results of use may be related to your age, living habits (exercise, diet, etc.) and attitude towards life.

Electric shock protection: Class 1 \ Class BF

Anti-corrosion liquid: Do not use this machine in an environment where there is a mixture of flammable anesthetics and air, or nitric oxide.

# Precautions

- > Confirm that the operating voltage is 200~240V
- > Make sure the power cord is properly connected

- ① During the care process of the i5 Ultrasound cannon, you may feel the skin heating up and turning red, and some people may experience pain. These are normal phenomena..
- ② This product must be used in conjunction with gel. Using it with other essences, water, freezeried powder, or using it while wearing makeup may cause the skin to produce a stress response.
- ③ Users should follow the recommended time and techniques in the manual during. They should not extend the usage time or the duration of the stamp stay to enhance the effect, as this may cause severe skin heating or even burns.
- ④ ant women, nursing mothers, those with skin wounds, inflammation, or allergies should not use this product.
- ⑤ During operation, no metal objects should be worn, those with metal implants in their bodies are prohibited from using it;
- ⑥ The energy level should be set at a warm and comfortable level, and should not be set high;
- ⑦ Absolutely avoid letting children touch the internal components of the machine through the small holes with metal objects to prevent the risk of electric shock

## Custody:

- ⑧ This product is a home beauty device and cannot replace professional medical aesthetic treatments. If you have serious skin issues, please seek the help of a professional.
- ⑨ If you experience any discomfort during use, please stop immediately and consult a professional.
- ⑩ Do not place the product in a damp, high-temperature, direct sunlight environment, as it may affect the usage effect and safety.

### 1.The device fails to respond upon startup

- (1) Confirm whether the power plug is securely inserted into the socket.
- (2) Check if the socket is electrified, you can test the with other electrical appliances to see if it is functioning normally.
- (3) Inspect the power cord for any damage or breaks.
- (4) Try to restart device to see if it can return to normal display.
- (5) Gently shake the beauty instrument to check for any loose parts.

## 2. The handle has no heat output and no energy output.

- (1) Inspect the connections between the handle and the tubing, as well as between the handle and the body, for any signs of looseness.
- (2) Check if there is any water inside the probe.
- (3) Verify the integrity of the probe's membrane.
- (4) Increase the amount of gel medium, set the energy level to the highest, and conduct a

### 3. During Operation, Sudden Stop

- (1) Check whether the power cord is loose;
- (2) Insufficient voltage.

If the listed failure phenomenon does not appear, please contact the after-sales service personnel to provide you with guidance.

(In order to allow you to use i5 more safely and efficiently ,  
Please accept the guidance and training of professionals first)

## Routine maintenance:

- 1、Instrument installation and use of the environment requirements clean, low dust, relative humidity  $\leq 85\%$ , no corrosive particles, conductive dust, etc, to avoid strong magnetic interference;
- 2、Choose a well-ventilated location, and do not place near heat sources such as radiators, thermal ventilation pipes or places where mechanical vibration will occur;
- 3、Flammable substances are forbidden to be used for cleaning and disinfection of the operating head and operating parts during operation.
- 4、Please keep all parts of the handle outlet clean to ensure the accuracy of the output energy;
- 5、After use, the gel residue on the applicator head must be cleaned, disinfected with alcohol wipes, and then dried with a clean towel. the handle and body of the device, please use a clean, soft cloth for wiping. Avoid using chemical cleaners or water for direct cleaning.
- 6、Do not use gasoline, wine, diluent and other chemical agents treated with cloth to wipe the surface of the case;
- 7、In order to ensure the normal use of the instrument, the purchase or replacement of the instrument accessories, please contact the manufacturer or agent directly.
- 8、This machine is a precision instrument, strong vibration and impact should be avoided during movement and transportation, and inversion is strictly prohibited to prevent damage to the system and electronic components in the machine;

## AFTER-SALE WARRANTY

The brand side provides long-term after-sales service for the instrument, life-long use guidance service, one-year warranty for the main unit, and three-month warranty for the handle:

- ① Host maintenance includes: host functional components, LCD screen failures caused by non-human factors;
- ② Handle maintenance includes: function operation handle, handle connection line failure caused by non-human factors.

The warranty period begins on the day the instrument is activated. After repair, if the same fault occurs again on the same part, it will be repaired free of charge within 30 days;The parts repaired and replaced during the warranty period belong to the company, and the parts repaired and replaced outside the warranty period belong to the user;The additional services and additional non-original configuration gifts promised by the agent shall be served by the original agent.

The following conditions do not meet the warranty conditions, and paid repairs will be provided:

- (1) Malfunctions caused by the user's negligence and improper operation;
- (2) Faults caused by natural disasters (fire, earthquake, flood, lightning strike, etc.);
- (3) Failures caused after the instrument warranty period expires;
- (4) Natural discoloration of relevant parts caused by heat generation in the characteristics of instrument components;
- (5) Free repair and replacement will not be provided for failures caused by disassembly and modification of the instrument by the user.

Warm reminder: In the event of a failure due to the above circumstances, the brand will still provide after-sales maintenance services, and reasonable maintenance will be charged for instrument or component failures Fees, cost will be charged if parts need to be replaced. The logistics costs incurred due to after-sales problems shall be borne by the user.
